Professor, DDS, PhD, Tissue Engineering group, Dept of Clinical Dentistry - Center for Clinical Research.

Helge Ræder

Professor, MD, PhD, Section of Pediatrics, Diabetes stem cell research group, KG Jebsen Center, Dept of Clinical Science.

“Bergen Stem Cell Consortium – a tool for basic and clinical research”

When: Wednesday 6th of April, 14.15 - 15

Where: Store Auditorium, 3rd floor, Sentralblokken

Chair: Jørn Sagen

Pizza for attendees between 14:05 – 14:15 !

In autumn 2014, Bergen Stem Cell Consortium (BSCC) was awarded strategic research funding for the period 2015–2019 by Det regionale Samarbeidsorganet i Helse Vest (the regional committee for research and cooperation in the Western Norway health region).

Bergen Stem Cell Consortium is a research initiative that is intended to function as a catalyst for stem cell research in Western Norway, led by and located in Helse Bergen health trust. The initiative is a collaboration between six local research groups that work in the field of stem cell research and share the goal of generating basic scientific knowledge about the use of stem cells and introducing personalised stem cell-based treatment.

The seminar is open for everyone!

Part of the Course FSKLI902 «Perspectives in translational medicine», 1 studiepoeng (1ECTS).
