SEMINAR

Tips for successful ELISAs

The ELISA method is a classic because of its speed, accuracy, specificity and low detection limit.

In this seminar you will learn about the advantages of using ELISAs vs other techniques. You will get tips to successful ELISAs, how to address issues associated with hook and matrix effects, the experiments required to validate a specific sample type, as well as the analysis of results.

We will also focus on the difference between absorbance, fluorescence and luminescence. And we will talk about the washing as this is a critical part of ELISA.

This seminar will be addressing scientists already familiar with the technique, but new users are also welcome!

Refreshments will be served.

Speakers:

- Morgan Mathieu PhD, Application Scientist Manager, Enzo
- Susanne Schöller, Product Specialist, Biotek Europe

Tuesday November 13th, 2018 from 10.00-12.00 or 13.00-15.00.
Laboratoriebygget, Haukeland Universitetssykehus,
rom 5.1 og 5.2, 5.etasje, Bergen
